#### PROPERTY INFORMATION

Present Use: Agriculture/Subsistence: agricultural outbuilding; Domestic: single dwelling

Historic Use: Agriculture/Subsistence: agricultural outbuilding; Domestic: single dwelling

Accessibility to public: Exterior visible from public road? Yes ☐No ☑

Interior accessible? Yes ☐No ☑If yes, explain __________________________

Style of building: Tobacco shed, Vernacular style

Date of Construction: c. 1880

#### Material(s) (Indicate use or location when appropriate):

- ☑Concrete (Type piers) ☑Cut Stone (Type) ☑Other vertical wood siding
- Clay ☐Asbestos Siding ☑Brick ☑Wood Shingle ☑Asphalt Siding
- Fieldstone ☐Board & Batten ☑Stucco ☑Cobblestone ☑Aluminum Siding
- ☑Other Wood siding

#### Structural System

- ☑Wood Frame ☑Post & Beam ☑Balloon ☐Load bearing masonry ☑Structural iron or steel
- ☑Other Square rule framing

#### Roof (Type)

- ☑Gable ☐Flat ☑Mansard ☐Monitor ☑Sawtooth
- ☑Gambrel ☐Shed ☑Hip ☐Round ☑Other

#### Roof (Material)

- ☑Wood Shingle ☑Roll Asphalt ☑Tin ☑Slate ☑Asphalt Shingle
- ☑Built up ☑Tile ☑Other Corrugated metal

#### Number of Stories: 1 1/2 Approximate Dimensions: 100’ x 25’

#### Structural Condition: ☑Excellent ☐Good ☐Fair ☑Deteriorated

#### Exterior Condition: ☑Excellent ☐Good ☐Fair ☑Deteriorated

#### Location Integrity: On original site ☐Moved When? ______________

#### Alterations? ☑Yes ☐No If yes, explain: Raised to add concrete floor and piers, leanto added in 1950s

#### FOR OFFICE USE:

- Town #: ________ Site #: ________ UTM ________
- District: ☑S ☐NR If NR, Specify: ☑Actual ☐Potential

• Interrelationship of building and surroundings:

The 22.2-acre property is a corner plot located towards the west of Tyron Street and the south of Old Maids Lane in the southwest corner of the South Glastonbury section of Glastonbury. A portion of the plot is across Tyron Street to the west, where is fronts on the Connecticut River. The property is situated bordering the town limits of Glastonbury, Portland and Cromwell in a predominantly residential area of rural character. Dense woodland can be seen towards the south-east, east and the north of the property across Old Maids Lane while parcels of open land can be seen towards the south. A residential parcel, is carved out of the northwest corner of the property, which is deep in the east-west direction.

The tobacco shed is located towards the west edge of the property, with its ridge-line running east-west parallel to Old Maids Lane to the north. The c. 1840 main residence is located in the south-west corner of the plot on the east side of Tryon Street. The ridge-line of the main residence runs east-west, almost perpendicular to the road. The house is a three-bay gable-end Greek Revival-style house measuring roughly 26' x 50' with a full pediment. The entry in the south (right) bay has a six-paneled door and plain pilasters. A later Colonial revival porch has square posts and an arched pediment. The windows are two-over-two double-hung sash. An oval window in the gable attic on the main façade, facing west, is now fitted with a square louvered vent. A parallel ell extends to the east.

A 1 1/2 - story saltbox-roofed English barn is located west of the tobacco shed with its ridge-line running north-south. Two greenhouses are located south of the tobacco shed. A red-painted steel water tank and a gable-roofed pump house with its ridge-line running east-west are located southwest of the shed. To the east of the greenhouses is a single-bay garage. Numerous modern sheds dot the landscape. A large modern barn is well off to the east towards the east border of the site. The property has parcels of farmland with active agriculture towards the north and the east.

Glastonbury has four National Register historic districts, the Glastonbury Historic District, also a Local Historic District, at Hebron Avenue and Main Street in the town center; the Glastonbury-Rocky Hill Ferry Historic District (2.5 miles north of this site); the Curtisville Historic District (west of the town center); the J. B. Williams Historic District; the South Glastonbury Historic District (1.5 miles north of this site) and several individually-listed buildings. This site is at the southern tip of the many recognized historic resources in Glastonbury, most of which are related to the proximity of the Connecticut River and the prime agricultural land along its banks.

Tobacco shed:

This is a 1 1/2-story gable-roofed tobacco shed with a lean-to addition. The shed has seven bents, six bays and two aisles. The ridge-line of the shed runs roughly east-west.
Exterior:

The main entries into the Tobacco shed are two pairs of X-braced hinged doors made up of vertical wood board with wrought iron hinges located in the north eave-side of the shed. These doors are not only used as egress, but also for venting. The north eave-side of the shed is six bays long with seven bents. Corresponding with each bent is a concrete foundation pier. The bay-wide pairs of doors take up the second and fifth bays. The remaining bays have a series of vertical wood board side-hinged vents, used for the curing of tobacco. Each board encompasses the nearly the entire height of the wall, from the top of the piers to the eave level. At grade are top-hinged vertical vents in between the bents at the pier level. Centered in the third bay from the east is a sign board with ‘15’ in white painted numbers.

The west gable-end has three concrete piers, one centered and one at each corner. Similar to the north eave-side of the shed, there is a series of vertical wood board side-hinged vents with each board encompassing the height of the wall, from the top of the piers to the eave level. At grade are top-hinged vertical vents between the piers. Centered in the gable attic is a rectangular pivoting vent. Extending south is the south wall of the leanto, which is covered with vertical wood boards.

The south eave-side of the barn is entirely encompassed with a leanto. The leanto is open on the south side, but has vertical wood board on the east and west ends. A small concrete pier is found at the east and west corners. The leanto is supported on the south side with vertical posts on small concrete piers, one corresponding with each bent. Each post has two diagonal braces, attached by nails. Inside the leanto, the exterior of the Tobacco shed is identical to the north eave-side, except that the doors in the second and fifth bay have been removed.

The east gable-end of the barn is identical to the west gable-end.

The shed measures approximately 100 feet long by 25 feet wide, with the leanto being 17 feet wide. The size of each bay is irregular; from east to west, the size of the bays are 13’, 15’, 16’, 14’, 14’ and 14’. The sheathing and vents are unpainted vertical wood board. The roof of the shed has a slight overhang with fascia and is covered with green corrugated metal panels.

Interior:

The north eave-side hinged doors access the interior of the shed, which is one large space with a poured concrete floor. There are two aisles running east-west, with the two aisles formed by the single center support post of each bent. The interior is made up mostly of hand-hewn timbers. The diagonal braces are circular-sawn, as are some girts. Extra horizontal rails, most of which are circular sawn, have been added throughout the shed to assist in the support of tobacco bunches that are hung to cure. The shed is made up of pegged square rule construction at each structural joint, although the rails are attached by nails. The interior of the roof has original plank boards with common rafters covered with plywood beneath the corrugated metal roofing.
Historical or Architectural importance:

Applicable Connecticut State Register Criteria:
1. Associated with the lives of persons significant in our past;
2. Embodying the distinctive characteristics of a type, period, or method of construction.

This tobacco shed and its agricultural setting are significant for their site in active agriculture and for the relationship to the Connecticut River, historically so important to the soil quality and transportation of this area. It is an exceptional example of its type due to its square rule post and beam construction which marks it as an early example. It demonstrates multiple ventilation methods used in tobacco curing. Finally, its association with the Tryon family adds significance to its history.

Historical background:

The farm was once a part of a larger farm owned by a prominent Glastonbury family, the Tryons.

According to documentary evidence, the Greek Revival-style house at 1099 Tryon Street (formerly known as River Road) appears to have been built in the 1840s. The house is attributed to “Captain Noah Tryon” on the 1855 Smith’s map of Hartford County, Connecticut. It appears that Noah Tryon built the house for his daughter Anna across Taylor road to the south, now known as Old Maids Lane. Interestingly, the house appears to be a ¼ size replica of the house located at 2 Hopewell Avenue in Glastonbury. Apparently Old Maids Lane is named after two of Anna’s cousin, although she herself could claim the title.

Both the tobacco shed and the English saltbox-roofed barn appear to have been built in the late 19th century. The tobacco shed supported tobacco growing from that period up until 1974. The barn was used for farm animals; a paddock is just to the north of it. The water tower and pump house were built in the 1930s. The leanto was added to the tobacco shed in the 1950s. Sometime in the 20th century, the Tryon’s sold the land to Consolidated Cigar who continued to grow tobacco until 1974. From 1974 until 2000, the site was used as a plant nursery. In 1983, Kogut Enterprises acquired the site. By 2000, at the time the current owner obtained the property associated with 1099 Tryon Street, Kogut had sub-divided all the land, selling most of the remaining lots to the Town of Glastonbury. The metal roof was added in 2000. The site has been used from 2000 until the present for organic farming.

Architectural significance:

The tobacco shed is significant not only for its form and use, but also for the family associated with it. Its form is similar to the standard form of Connecticut tobacco sheds; long, low windowless buildings with pitched roofs. They are characterized by vented sides to regulate air flow. The wood-framed bents sit on concrete foundation piers and the bents are connected by girts and diagonal braces. Typically there are two doors at each end, making the shed a “drive-through,” although some sheds are accessed through doors on the sides as is this one. The interior structural framework serves a second purpose in addition to supporting the walls and roof of the building; it provides a framework for the rails used to hang the tobacco as it cures. This tobacco shed is framed with hewn square rule post and beam joinery, which indicates that it is comparatively early for a purpose-built tobacco barn. The irregular bay size confirms this, as tobacco shed construction became highly standardized in the 20th century.

The shed at 1099 Tryon Street incorporates three of the four ventilation systems found in Connecticut tobacco sheds rather than just one system. This shed combines side-hinged vertical board vents with top-hinged horizontal vents at grade, between the foundation piers, and also uses its double hinged doors for ventilation.

The site is also significant for over a century of continuous active agriculture, particularly the growing of a single crop, tobacco. The site has been in agricultural use since the mid-19th century and continues to be used in that manner today as an organic produce farm.

Another factor in its significance is the family associated with the site. The area extending south on Tryon Street (formerly known as River Road) from the crossing of the brook from Great Pond (an area known as Shingle Hollow) to the drop of the roadway by the Connecticut River, from the west by the river east to the foot of the hill...
on Old Maids Lane is generally known as Tryon Town. The Tryon family had extensive holdings in the area and was a prominent family in early Glastonbury.
